

Kontos[®]

Kontos Insecticide/Miticide Tip Sheet Drench Applications

Drench Rates are based on per litres of growing media (not litres of water).

Example:

Using standard application rate of 5 mL/100 L of growing media.

One 6" pot is equal to approximately 1 L of growing media.

One hundred 6" pots is equal to approximately 100 L of growing media (100 pots x 1 L).

Therefore 5 mL will treat one hundred 6" pots and 50 mL will treat one thousand 6" pots.

Water volume recommendation:

Water volume should be between 100-150 mL per 6" pot.

100 mL of solution per 6" pot
100 mL x 1000 pots = 100,000 mL (or 100 L)

Therefore mix 50 mL in 100 L of water to treat 1000 pots (6").

Drench Application Ornamentals

Pest	Rate
Whiteflies	2.5-5 mL / 100 L
Western Flower Thrips, Spider Mites	5-10 mL / 100 L
Citrus Mealy Bug	3 mL / 100 L
Green Peach Aphid	2.5 mL / 100 L
Euonymus scale	7 mL / 100 L
