

Rhapsody[®] ASO

Broad Spectrum Biofungicide

Fact Sheet

Rhapsody ASO is a broad spectrum, preventative biofungicide for the suppression of many greenhouse vegetable, greenhouse ornamental and outdoor ornamental fungal and bacterial related diseases.

Based on a naturally occurring patented strain of *Bacillus subtilis* (strain QST 713), Rhapsody is equipped with a combination of naturally occurring antifungal and antibacterial lipopeptide compounds. These compounds utilize multiple modes of action to destroy pathogens, making Rhapsody an effective resistance management tool.

PREHARVEST INTERVAL

Can be applied up to and including the day of harvest.

DISEASES CONTROLLED

Rhapsody suppresses common fungal diseases such as Powdery Mildew, Botrytis, Anthracnose and leaf spots

Rhapsody also suppresses bacterial diseases such as *Psuedomonas*, and *Xanthomonas* spp., as well as soil diseases *Rhizoctonia*, *Pythium* and *Phytophthora*.

* Refer to product label for detailed list of diseases and plant material that can be treated.

Benefits of Applying Rhapsody

- ☑ Labelled for Soil Drench applications on greenhouse and outdoor ornamentals
- ☑ Proven efficacy against BOTH bacterial and fungal pathogens
- ☑ Performs on par with copper-based products without phytotoxicity
- ☑ Can be sprayed up to and on the day of harvest
- ☑ Controls disease using multi-site modes of action for resistance management
- ☑ Negligible risk to pollinators and beneficial insects
- ☑ Compatible for tank-mixing / rotating with many other registered inputs

ACTIVE INGREDIENT

QST 713 strain of dried *Bacillus subtilis*, contains a minimum of 1×10^9 CFU/g.

PACKAGING

9.46L jug.

APPLICATION RATE

Varies by crop, see label for complete details.

Rhapsody[®] ASO

Application Tips

- ☑ For maximum effectiveness, apply prior to or in the early stages of disease development.
- ☑ When conditions are conducive to heavy disease pressure, use in a rotational program or in conjunction with other registered fungicides.
- ☑ Use maximum label rates and shortened spray intervals for conditions conducive to rapid disease development.
- ☑ Apply in sufficient water volume to give good canopy penetration and coverage of plant parts to be protected.
- ☑ The use of adjuvants or a spreader/sticker or wetting agent is strongly recommended to improve canopy penetration and coverage.
- ☑ Maintain a spray solution pH between 4.5 and 8.5.
- ☑ Spray solution must be agitated during mixing and application to assure a uniform suspension. Do not allow spray mixture to stand overnight or for prolonged periods.
- ☑ Rhapsody ASO may leave a noticeable residue on some dark coloured fruits (i.e., green or red peppers). Adequate spray coverage through proper nozzle selection and spray water volume, along with the use of spreader adjuvant may help to minimize this. It is advisable to treat a few plants prior to large scale treatments, to determine if the residue is acceptable.

COMPATIBILITY

Rhapsody remains in solution very well as it is a aqueous/liquid suspension. It is compatible with a wide range of pesticides, fertilizers and adjuvants, including many commonly used spreaders/stickers and organosilicone wetting agents. It is recommended that a jar test be performed before tank mixing with another product to ensure compatibility. A tolerance test should also be done on a few plants to test for phytotoxicity and residue, when evaluating tank mix combinations for the first time.

ENVIRONMENTAL IMPACT

All pesticides are regulated under the Pest Control Products Act to ensure that they do not pose an unacceptable risk to human health and the environment. For information regarding the pesticide regulatory process, visit Health Canada's Pest Management Regulatory Agency website www.hc.sc.gc.ca/pmra-arla
